Education

Northeastern University, Boston, MA

Master of Science in Computer Systems Engineering - Internet of Things

Expected December 2020

* **Courses:** *Algorithms, Data Science, Object-Oriented Design, Data Networking (TCP/IP, etc.)*

State University of New York at Buffalo, Buffalo, NY

Bachelor of Science in Computer Science, Bachelor of Arts in Mathematics

December 2018

* Dean's List * Tau Sigma National Honor Society

* **Courses:** *Machine Learning, Artificial Intelligence, Operating Systems, Data Structures, Computer Organizations*

Technical Skills

Programming languages: Python, Java, C, C++, R, PHP

Database and Cloud Platform: MySQL, Hadoop, AWS

Web Development: JavaScript, HTML, NodeJS

Operating Systems: Linux, Unix, Windows

Work Experience

Diversiteam, Singapore

May 2019 - August 2019

Full Stack Developer Intern

(Python, C, MySQL, AWS, Machine Learning, OCR, NLP, OpenCV, TensorFlow)

- Designed machine learning models, Bidirectional Long Short-Term Memory (Bi-LSTM) and Convolutional Neural Networks (CNNs), to identify resume sections and soft skills, achieving positive accuracy rate of 90%.
- Evaluated the importance of features that is useful for collecting data and designing machine learning models for the state-of-the art good candidate identification.
- Developed an image and text recognition system for resume parsing by designing workflow from scratch using machine learning models including Bi-LSTM, CNNs, and NLP techniques in Python.
- Applied researched computer vision technique (OpenCV) and character recognition technology (OCR) to eliminate noises in various resume formats and colors.
- Developed and maintained major features and API templates coding in Python and C to extract features for resume parsing and good candidate evaluation from MySQL database.
- Optimized algorithms to improve the overall resume parsing performance including both accuracy and speed performance by reducing both space and time complexities.
- Implemented a communication platform in Python and PHP between web server and AWS EC2 via FTP and SFTP to launch resume parsing script make the whole process cost effective and scalable.

Embedded Sensing and Computing Lab, Buffalo, NY

August 2018 – January 2019

Undergraduate Research Assistant

(Python, C, Deep Learning, TensorFlow, OpenPose, OpenCV)

- Successfully accomplished the project and published the research paper on IEEE.
- Built a tool to extract skeleton key points from video surveillance using deep learning and IoT technology.
- Designed a deep learning model in Python and C to identify and to distinguish fall motion from other human activities with 95% of the positive fall detection rate.
- Evaluated and optimized the model to significantly increase the efficiency of fall detection to compute in real-time by reducing the system's complexity.
- Presented the Fall Detection project and the significance of human skeleton extraction method to the public during the Computer Science Education Week at the University at Buffalo.
- Utilized computer vision technology in Python to analyze human foot parameters including foot length, foot width, foot circumference, heel circumference, toe height, and foot back height.
- Designed algorithms to determine the foot shape of a person using Euclidean distance, circle, and ellipse circumference with at least 90% of the overall correct foot parameters' estimation.

Experiential Learning Project, Curbell Medical, Buffalo, NY

August 2018 – December 2018

Software Developer and Researcher

(Python, Machine Learning, TensorFlow, Scikit-Learn, Arduino)

- Designed machine learning models including K-Nearest Neighbors, Random Forest, and Convolutional Neural Networks to analyze unusual human's activities in real-time using Tensorflow and Scikit-Learn.
- Analyzed human motions' data, visualized and interpreted statistical data collected from the models and OPPORTUNITY dataset, and recommended an efficient system to Curbell Medical team.
- Led the software team in researching and developing the models to follow the project timeline.
- Collected patient's movements dataset using Arduino to feed to the models.
